DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 16 is rejected under 35 U.S.C. 102(b) as being anticipated by *Fitzgerald, V et al.* (US 5,787,485).

2. As per claim 16, *Fitzgerald* teaches a host comprising:

- a processing unit (45, Fig.1) ; and
- a memory interface module (controller 1 (70) + controller 2 (85), Fig. 1) to permit accesses to a logical entity to be made to one physical storage location (10) for read request and to a different physical storage location (20) for a write request.

(Abstract, col. 1, lines 29-col. 2, lines 1-41, Figs. 1-4)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2182

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 20-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over *McBrearty et al.*, (US 6,216,211).

4. As per claim 20, 23, 24, and 26, *McBrearty* teaches a storage management controller for computer storage system that includes a plurality of storage elements, the storage management controller comprising:

- an interface module (Logical Volume Memory, 30, Fig. 1, 2) to communicate with the storage elements; and
- an entity movement manager (Logical Volume Memory, 30, Fig. 1, 2) to control separate moving of a read location and a write location for a specified logical entity.

5. *McBrearty* teaches a method of creating a copy of a logical entity and moving all reads of the logical entity from a backup/primary storage element to mirror backup storage element (Mirror II or Mirror III). During the read operation, write operations are being mirrored to a second or third mirror backup storage element. Those write block operations are marked stale, during the copying of the read operations. When the read operations are completed, the entry point thereto is deleted and the write block operations that were marked stale on the mirror backup storage are then resynchronized, i.e. updated. It would have been obvious to one of ordinary skill that

Art Unit: 2182

McBrearty teaches that updated write operations are separately moved to the mirror (Mirror II or Mirror III) backup storage. (Abstract, col. 2, lines 54-60, col. 5, lines 47-67, col. 6, lines 32- col. 7, lines 1-64)

6. As per claims 21, *McBrearty* teaches of assigning an ID (minor number) for the logical volume. (*McBrearty*, col. 5, lines 10-14)

7. As per claims 27 and 28, *McBrearty* does not expressly teach wherein the logical could be a hyper-volume or striped volume. However, such volume methods are well known in the art, thereby making use of these methods obvious.

8. As per claim 29, *McBrearty* teaches wherein the logical entity is a partition.

9. As per claim 22, *McBrearty* does not expressly teach wherein logical entity IDs is stored in a database. *McBrearty* teaches of storing the logical entity IDs in system memory. However, one of ordinary skill would readily recognize that it would not be out of the scope of the *McBrearty* system to store the logical entity IDs in a separate database. Doing so would further add flexibility to the system.

10. As per claims 25 and 30, *McBrearty* teaches the means for creating a copy of the logical entity on the second physical storage locations; means for moving all reads of the logical entity from each of the first physical storage to the second physical storage

Art Unit: 2182

location; and means for moving all writes to the logical entity to the second physical storage location, after all of the reads have been moved to the second physical storage location.

Allowable Subject Matter

Claims 1-15 are allowed over the prior art.

Claims 17-19 are objected to as being dependent upon a rejected base claim, but would be allowable if added to the rejected independent claim.
